

National Severe Weather Warning Service

Chief Forecasters Assessment

A very deep depression for this time of year is centered near northern Scotland and will move only slowly away northeast today. For the time being, it will maintain the windy spell across most parts of Britain, these conditions lasting well into Tuesday. As the day wears on, the gustiest conditions will become more confined to England and Wales, before easing down later this afternoon and evening.

The Met Office have issued a **Yellow Warning of Wind**

Valid from **05:55 on Tue, 02nd Jun 2015** until **18:00 on Tue, 02nd Jun 2015**

Strong to gale force winds with gusts to 40 to 50 mph in places will continue to affect parts of the UK again today - indeed gusts could reach around 55 mph in a few exposed sites. Given the unseasonable nature of the winds, the public should be aware of the potential for localised disruption to transport and outdoor activities, while damage to some trees remains possible.

This is an update to the warning, first issued on Sunday, to remove parts of northwest Britain (which experienced their peak winds on Monday) and to fine-tune gust speeds for other regions.
